

Benefits of Vitamins & Supplements

The right dog vitamin and supplements can play a significant role in correcting many common problems that pet owners face. In fact, most pet owners are happily surprised at the excellent results of supplements such as Trace Minerals, Enzymes and Probiotics.

Yet with that said, we want pet owners to realize that good health begins with diet. [A High Quality Dog Food](#) should always be the first defense in keeping a dog healthy.

"Norwegian Kelp" Trace Mineral

The seaweed "Kelp" and kelp beds are found in the cold sea waters. Rich in natural iodine, this mineral supplement is used for people, dogs and other animals as well. Unfortunately, even the best commercial dog food brands may lack minerals or include an inadequate form causing poor absorption. This incredible mineral is very economical and an excellent way to add back the minerals that are lost in commercial foods. Kelp can play a vital role in sustaining and restoring a dog's good health.

Available in powder, granules, concentrated liquid or tablet form. Since most tablet forms lose their potency during manufacturing, the powder, granules or concentrated liquid is recommended. For correct dosage, follow the directions on the packaging. Also, since Kelp is high in Iodine, be sure to check with your dog's Veterinarian first if your best friend is on any medication or is being treated for a thyroid condition.

The Benefits Of Kelp

- Kelp can aid in thyroid treatment for dogs
 - Good for the heart
 - High in anticancer properties
 - Aids in digestion
 - Re-energize aging animals
- **Kelp** contains trace minerals & vitamins essential to proper digestion and skin & coat development. Over 65 essential trace minerals, vitamins and amino acids, many of which are missing from your pet's diet. Formulated with only the highest quality Norwegian Kelp, which is one of the richest sources of trace minerals in the world. Kelp Help combines the benefits of natural Omega 3, 6, and 9 Fatty Acids for healthy skin and a glossy coat, as well as being fortified with ESSENTIAL vitamins and minerals important to maintain normal digestion and proper vitamin utilization

Digestive Enzymes And Probiotics

Like people, dogs symptoms vary with each individual dog. Even when fed the very best diet, many dogs will still require additional digestive support. [Digestive Enzymes](#) provide this much needed support.

There are four digestive enzymes that all do something different: Proteases which breakdown protein, Amylases for breaking down carbs,

Lipases breakdown fats and Celluloses breakdown fiber and vegetable substance. These enzymes are needed for your dog to properly digest his food and absorb vital nutrients to maintain a healthy digestive system.

Enzyme supplements and Probiotics can make a tremendous difference when dealing with the following issues as well as many others:

The Benefits Of Digestive Enzymes/Probiotics

- Allergies
- Gulping Food Which Can Lead To Larger Problems (Bloat)
 - Irritable Bowel Syndrome
 - Colitis
 - Acid Reflux
 - Gas and Belly Rumbling
 - Skin/Coat Problems

Vitamin E

If you already take Vitamin E yourself, consider slipping one to your best friend daily. This inexpensive vitamin is an excellent dog vitamin and has so many benefits for the health and well being of your dog:

The Benefits Of Vitamin E

- Promotes healthy circulation in both people and dogs
 - It is believed to slow down the aging process
 - Prevents cataracts
 - Stimulates the immune system
 - Provides endurance (increases the energy level in working dogs)
 - It is also believed to dissolve tumors (primarily in the breast)
 - Improve spinal problems in canines
 - Great for the skin and coat
